hypothetical 16.2K protein - phage SPP1
N'Alternate names: hypothetical protein 42
Sispecies: phage SPP1
C;Species: phage SPP1
C;Species: phage SPP1
C;Accession: JN0729; S43816; S41190; T42347; S21429
C;Accession: JN0729; S43816; S41190; T42347; S21429
C;Accession: JN0729; S43816; S41190; Trautner, T.A.; Alonso, J.C.
Gene 129, 41-49, 1993
A;Title: Sequence analysis of the left end of the Bacillus subtilis bacteriophage SPP1
A;Reference number: JN0729; MUID:93328123; PMID:8335259
A,Cross-references: UNIPARC:UP100001777B1; UNIPARC:UP100001777B2
A,Accession: $10672
A,Molecule type: protein
A,Residues: 62-82 <182>

Clusterin - sheep (fragments)

NiAlternate names: SGP2; sulfated glycoprotein 2

Cispecies: Ovis orientalis aries, Ovis ammon aries (domestic sheep)

Cispecies: Ovis orientalis aries, Ovis ammon aries (location orientalis aries)

Cibate: 30-Sep-1993 #sequence revition 30-Sep-1993 #text_change 19-Oct-1995

Ciaccession: A60457; S10671; S10672

Right Sisperial No. D.; Sishop, P.D.; Kim, K.H.; Ping, R.; Siiteri, J.E.; Morales, C. Ann. N. Y. Acad. Sci. 564, 154-172, 1999

A;Title: Function of vitamin A in normal and synchronized seminiferous tubules.

A;Accession: A60457

A;Molecule type: protein

A;Reference number: NIPARC:UP10000177780

-i- PTM: N-glycosylated.
-i- PTM: The N-terminus may be blocked.
-i- SIMILARITY: Belongs to the peptidase S9B family.
                                                                                                                                                                                                                                    Goldstein L.A., Chen W.T.;

                                                                                                                                                   Isola-P97321-3; Sequence=VSP 005369;
TISSUE SPECIFICITY: Detected in fibroblasts, in placenta, uterus, embryos from day 7-19 and in new-born mice (Pl).
SIMILARITY: Belongs to the peptidase S9B family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Charge relay system (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         biosynthesis.";
J. Biol. Chem. 275:18029-18033(2000).
-!- FUNCTION: High-affinity nickel transporter responsible for nickel
uptake. Required for urease biosynthesis.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: Belongs to the NiCoT transporter (TC 2.A.52) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=20309746; PubMed=10748059; DOI=10.1074/jbc.M001978200; Eitinger T., Degen O., Bohnke U., Muller M.; "Niclp, a relative of bacterial transition metal permeases in Schizosaccharomyces pombe, provides nickel ion for urease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Fungi; Ascomycota; Schizosaccharomycetes;

Acad. Sci. U.S.A. 93:14503-14508(1996).

Proc. Natl. Acad. Sci. U.S.A. 93:14503-14508(1996).

I stone deacetylation of lysine residues on the N-terminal part of the core histones (HDA, HDB, H3 and H4). Histone deacetylation gives a tag for epigenetic repression and plays an important role in transcriptional regulation, cell cycle progression and developmental events. Histone deacetylases act via the formation of large multiprotein complexes.

-1- SUBCELLULAR LOCATION: Nuclear.

-1- SIMILARITY: Belongs to the histone deacetylase family. Type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The nucleotide sequence of Saccharomyces cerevisiae chromosome XIV

Alanyl-tRNA synthetase (EC 6.1.1.7) (Alanine--tRNA ligase) (AlaRS)
NamesalaS, OrderedLocusNames=RT0845;
Rickettsia typhi
           diphosphate + L-alanyl-tRNA(Ala).
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: Belongs to the class-II aminoacyl-tRNA synthetase

-!- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IIb/beta-3. May play a role in dentinogenesis and/or maintenance of dentin and dental pulp.
-!- SUBUNIT: HOMOLYIMEY disulfide-linked.
